Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The abstract of the disclosure is objected to because legal phraseology such as "the present invention" is used. Correction is required. See MPEP § 608.01(b).
2. Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, it is unclear what "a two part apparatus" and "a plurality of alphanumeric displays". Are they shown in any of drawings? Furthermore, it is unclear how each of the claimed elements are interrelated and associated with each other.

In claim 2, "it is unclear what "a first connection unit part", "a second measurement and display part" and "weather proof connectors" represent. Are they shown in any of drawings?

In claim 6, it is unclear what "a light emitting diode bar graph" represent. Is it shown in any of drawings?

In claim 9, "said operation" has no antecedent basis. Furthermore, it is unclear what has been claimed.

In claim 10, "said learning" has no antecedent basis. Furthermore, it is unclear how "learning" is interrelated and associated with other claimed element in claim 1.

The dependent claims not specifically address share the same indefiniteness as they depend from rejected base claims.

Art Unit: 2829

It is noted that the phrase "We claim" appears in all claims should be deleted since they are improperly recited in the claims.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Wilfong (Pat # 6,404,348).

As to claim 1, Wilfong discloses a modular power quality monitoring device having a plurality of LED indicators (22), means for connection (electric wires) to a single phase or polyphase power lines (ABC), analysis circuits (12,28,42,10,32) for determining the existence and duration, or alternatively, the non-existence of specific power line abnormalities. It is noted that the microprocessor (10) inherently has memory for memorizing the indicated abnormalities.

Art Unit: 2829

As to claim 2, it appears that the measurement & display parts are connected to connection unit part (electric wires) is extending at the range between zero and 1000 feet.

As to claim 3, it appears that both measurement and display parts and connection parts (electric wires) are unified into a single module.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Burke et al (Pat # 4,362,986) disclose method and apparatus for monitoring faults in an electric power system and the like.
